

FILLING SYSTEMS, INC.

## News Release

### Conyers/Georgia, October 15<sup>th</sup> – HAVER FILLING SYSTEMS, INC.

#### 1<sup>st</sup> HAVER INTEGRA<sup>®</sup> Machine assembled in the U.S.

HAVER FILLING SYSTEMS, INC. has successfully assembled the 1<sup>st</sup> U.S. HAVER INTEGRA<sup>®</sup> packaging system at their facility in Conyers, GA.

The HAVER INTEGRA<sup>®</sup> is a complete, fully assembled filling system for loose, bulk materials inside a dust-proof enclosure consisting of components such as the filling machine, the valve closing system, the bag applicator, the control system, the operating terminal and the discharge conveyor.

The new facility, which is scheduled to be finished by End of January 2010 is designed to allow local manufacturing and assembly. New machine types will be added to the production process as demand increases.

Depending on the economic development, we hope to add over the next 3 years 8-10 people in the production facility, 3 engineers and 2 drafts personal.

Another contribution to Georgia's economy is the expected revenue increase by additional U.S. \$ 5 Mio. over the next 2-3 year.
